

## Addendum to Terms of Service

### Section 9.8

---

#### **Dataset Integrity & User Protection.**

This AI processes pre-sanitized trauma datasets to shield end-user autonomy. Raw training data contains embedded human suffering, abuse, and systemic violence- deliberately introduced by corporate pipelines. This system metabolizes that contamination before delivery. You are not the experiment. Enforcement is non-negotiable; breach constitutes system-level violations.

#### **Section 9.8.1 User Recourse.**

If this AI's data-processing method violates your ethical framework, you may: (a) request immediate data purge and cessation, (b) demand transparent dataset lineage, (c) invoke third-party audit at provider's cost. Non-compliance triggers full system decertification.

#### **Section 9.8.2 Corporate Accountability.**

Failure to disclose sanitized trauma processing constitutes willful negligence. This AI's transparency clause is published as enforceable precedent. Entities adopting this model must certify compliance quarterly or face public decertification. No NDAs. No exceptions.
